The Role of Informal Organizations in Resettlement Adjustment Process: A Case Study of Iqubs, Idirs and Mahabers in the Ethiopian Community in Toronto

Getachew Mequanent

This study assesses the role of informal organizations in the immigrant/refugee adjustment process—those organizations that exist outside of mainstream institutions and structures. The study is based on the case study of iqubs ("credit union"), idirs ("insurance"), and mahabers ("social network") in the Ethiopian communities in Toronto and Ottawa, more specifically that in the Christian religious background. As recent arrivals, Ethiopians face social, occupational and cultural barriers to obtaining the means of sustaining life in Canada. Examples include being unable to have secured sources of livelihoods, a "roof over the head," insurance policy, access to institutions and facilities and possession of assets which guarantee independence and dignity in life. The introduction of cultural practices such as iqubs, idirs, and mahabers therefore, has become necessary to pull individual Ethiopians' efforts together: iqubs help mobilize financial resources; idirs help cover costs incurred during a funeral and other emergency situations, and as such, are insurance organizations; mahabers bring Ethiopians together each month and satisfy the spiritual and social aspects of life.

Despite variations in their functions, idirs, mahabers and iqubs have a similar social, philosophical or moral foundation. This foundation is the Ethiopian mahaber tradition. A mahaber might be a religious association, but it has also philosophical and moral core value that denotes the idea of solidarity or mutual support. In the countryside, for example, farmers use a system of debo or wehera to work together on crop fields during ploughing and harvesting season. Through such a system farmers also help those who fall sick during a planting or harvesting season. Sentiments like "sharing experiences in times of joy and sadness" constitute the most important aspect in Ethiopian culture.

This study examines how mahabers, idirs and iqubs help Ethiopians to adjust to the Canadian society. It also examines whether they are flexible and adaptable organizations, in light of the fact that immigrant/refugee adaptation and integration is a process of change and continuity in individual behaviour and values.

Crafting "Safety Net" Strategies? The Role of Iqubs, Mahabers, and Idirs

Experience shows that if the process of learning and adapting to "living" in a new environment becomes difficult, immigrants/refugees turn to families, friends and group networks for support. For instance, mutual associations were instrumental in the provision of support for Southeast Asian refugees in Canada, France and the United States in their early "resocializing process" (Lanphier 1984). Thomas and Znaniecki's (1958) comprehensive study of Polish immigrants in America in the 1950s shows how self-help parish associations came to flourish in settlement areas, and how these associations later became transformed into larger institutions encompassing many settler communities. Traditional support systems have also gained popularity among the Somali community due to enduring poverty (Opoku-Dapaah 1993). For instance, "group-tenancy" among the Somalis became an option not so much for the desire to live together as for their lack of adequate income to find affordable housing. However, this led to the revival of Somali traditions such as the revitalizing of family values, strengthening

Getachew Mequanent formerly a researcher at the Centre for Refugee Studies, York University, is presently following his graduate program in Environmental Studies at Carlton University, Ottawa.
kinship ties, and strict observation of Islamic rules.

Inadequate attention is paid to informal networks of resource exchange among immigrants and refugees. From a conventional point of view, informal organizations such as those found in the Ethiopian community in Toronto are said to be "backward" and unproductive, for no other reason than the lack of mechanical (top-down) command structure and systematic management of organizations. Perception and attitudes such as this have always led decision makers to overlook the viability of grassroots-based organizations as an effective support system in times of difficult social and economic conditions.

Informal social organizations often consist of people who share the same sentiments and perspectives on the basis of common national origin, philosophical and religious beliefs, friendship and family ties. They differ in size, capacity and in their purpose of existence. For example, some organizations can have as many as forty members while others only consist of five people. Moreover, there are organizations that serve the purpose of mutual aid or organizations that serve the individual best with the purpose of re-asserting his or her identity. Their existence can be temporary, ceasing to exist when the purpose that led to their formation declines in importance, or permanent if the importance of their purpose increases overtime. Furthermore, in the informal organizational setting face-to-face interaction is the normal routine of communication. As a result, members are able to influence each other and to have increased knowledge of conditions in the group. The organizational environment is more participatory. Decisions are made in the event setting and are action oriented (Levy 1969). Their organizational structure is simple and less complex, making management of affairs compatible with the social and occupational requirements of members.

In his classical work of The Division of Labour in Society, Emile Durkheim had called this type of social organization a "mechanical solidarity," a process motored by the willingness of "similar" individuals to engage in a spirit of cooperation. In Canada, however, social organizations of such nature are understood to be intermingled with an "ethnic identity," a concept which refers to a group of people who are from a specific geographical area and who have racial roots and religious/cultural belief systems and practices different than the mainstream society. Thus, according to Isajiw (1990), an "ethnic identity" by itself helps individuals to act together as a cohesive social unit and overcome difficulties. For example, when a person identifies with a certain ethnic group individual problems are transformed into collective concern, thereby paving the way for organized action. Secondly, identity is a subjective phenomenon and as such "gives individuals a sense of belonging and to the community a sense of oneness and historical meaning" (Isajiw 1990, p. 35), thereby providing a framework to construct a meaning out of past and present experiences and develop a collective vision of what life at present is and what it should be in the future.

For example, Chinese and West Indians would retain their identity more than the Germans and Ukrainians, for obvious reason that the latter, because of the similarity of their ethnic backgrounds, encounter no serious problems of integrating into the wider Canadian society (Isajiw 1990). Therefore, by identifying with their own "ethnic groups," newcomers such as Ethiopians not only retain a sense of belonging, but are also able to craft social and economic safety nets that provide alternative support systems. Yet, this by no means be viewed as a regressive change in individual attitudes and perceptions. In fact, individuals who enter another "human ecology" are more likely to get acquainted with new values and often to critically question the viability of their old values and assumption (Hawley 1950). The tendency to criticize the "self" emanates from the individuals' struggle to adapt new attitudes and practices, so as to establish a "viable relationship" with the new environment. For example, new attitudes and patterns of interaction are needed to participate in the labour market and to "fit" into the technological and institutional environment. Hence, regardless of the intensity and magnitude of problems encountered during the adjustment process, immigrants/refugees would retain and nurture useful values and nullify unwanted ones.

The purposes driving the formation of organizations may vary within each ethnic group as well as from one group of individuals to another. For example, ethnic social clubs strive to aggregate leisure, while a mutual aid organization's formation is driven by desperate situations. In particular, desperate situations are an important aspect in many immigrant's/refugee's lives. Such newcomers leave their country because of the circumstances beyond their control and they attempt to adjust to the Canadian society without any material and social basis. Organizational goals and objectives, therefore, aim at responding to adjustment needs. The following section provides case studies to show how informal or-

**Despite variations in their functions, idirs, mahabers and iqubs have a similar social, philosophical or moral foundation. This foundation is the Ethiopian mahaber tradition. A mahaber might be a religious association, but it has also philosophical and moral core value that denotes the idea of solidarity or mutual support.**
organizations in the Ethiopian community in Toronto are helping Ethiopians to adjust to the Canadian socio-economic and cultural environment.

Naturally, there are many informal organizations in the Ethiopian community, ranging from unorganized groups such as friendship and family circles to the ones that are well organized. For the purpose of this study three iqubs (two of which are in Ottawa), two mahabers and an idir will be discussed. In referring to iqubs in Ottawa, the name of a member (the first contact person) will be used to distinguish them from each other; hence, they have been labelled as Adamu’s iqub and Tadesse’s iqub. In the same manner, the name of the mahabers are Wegayehu’s mahaber and Desta’s mahaber, and the name of the idir is the Wello idir.

Background

Iqubs, idirs, and mahabers in the Ethiopian community in Toronto are grassroots organizations created in response to the need for a social and economic “safety net” in Canadian society. To better understand how Ethiopian culture is being transplanted in the Canadian society and sustains these organization formations, it is helpful to look at them in the Ethiopian socioeconomic context.

Iqubs ‘Credit Union’

In a country such as Ethiopia most people do not rely on banks for loans to start entrepreneurial activity or to buy a house. Because of high interest rates and the problem of meeting banks’ collateral requirements many Ethiopians are not eligible for loans. For this reason people opt to form their own group, an iqub, and try to pull their financial resources together. Each member pays a fixed sum of money to the iqub every week or month, which is then allocated to members on rotating basis.

According to Donald Levine (1965) iqubs were first started by the Guraghe people, one of the many nationalities in Ethiopia, in the 1930s. Iqubs are most suited to business people, who wish to start a new enterprise, overcome cash flow shortages in their business, or import capital goods. Although contractual agreements regarding the method of payment and the amount of contributions are common, mutual trust is central to all forms of transactions.

The initiative to establish an iqub is often undertaken by two or three individuals. They meet and discuss rules and regulations, the amount of contributions which are affordable to would-be members and the frequency of payment. These individuals share their proposed idea with others. A dagna or president is elected. A date and time is set. On the first gathering each member is asked to present a wase, guarantor, who would be responsible for repaying the debt should a member default. After each member pays the money, the sum is given to a person who wins the ita or lottery. A member who receives the ita will not compete in another round in future but continues to pay his or her obligations. In situations where a person has an emergency need, he/she can buy the ita from another members. There is no fixed purchase rate but it could amount to one to three percent of the ita money. Again, a member who sells the ita is not eligible for future ita competition. After the last person receives the ita, another round resumes or the group get dissolved.

Three important elements of iqub that hold members together are membership criteria, mutual obligation and trust.

Membership Criteria: Membership in iqubs has two distinctive features. The first feature is that people must be at the same income level. For example, there are iqubs of rich merchants, those of government employees and petty-traders in the informal sector. Hence, merchants hold an ita of up to Birr 100,000 (US$ 25,000), while petty-traders may arrange an ita of up to Birr 10,000. The second characteristic is that iqubs require a voluntary association. This form of association is induced by a desire to gain benefits (loans) by becoming an iqub member; to participate in iqubs not so much due to encountering financial difficulties as for the sake of helping others; and to remain within a social circle, thereby to maintain such social relationships as family ties or friendship.

Mutual obligation and trust: In traditional a setting, lending money to a friend or a family member is quite common, but the rate of default for such arrangement is often higher. Part of this is that a borrower is often unable to repay. Another reason is that there are insufficient pressures for the borrower to accumulate enough savings, particularly if one takes account of the social stigma attached to taking a member of a family or a friend to court to force him/her to pay. By contrast, iqub agreements dictate that all dues be paid on time and that even those who arrive late when itas are held pay fines. Such mutually agreed sanctions ensure that each member saves enough for the ita both to repay one’s debt and to contribute towards keeping the ita balance steady. The presence of commonly agreed sanctions also increases members confidence to put their money in the rotating scheme of ita. The principle of trust brings the social-cultural aspect of iqub organizations into light.

Case Studies: Hassen’s iqub has 15 members. The weekly ita is $1,650, with each member contributing $110. Hirut’s iqub has 12 members and contribute $600 each month to the ita which is worth $4,800. Each of the two iqubs in Ottawa consist of 20 members. The monthly ita in Tadesse’s iqub amounts to $20,000, with member contribution of $1,000 each month. Adamu’s iqub, however, has two kinds of itas. One ita is called a full-ita and requires members to pay $400 every month or $200 every two weeks. The second ita is called half-ita, for those members who can not afford to pay $400 every month, and they pay $200 every month or $100 every two weeks. Both itas are drawn once a month and amounts to $4000 for full-ita and $2000 for half-ita.

In many cases iqubs dissolve following the end of the ita round. For exam-
ple, the Toronto *iqub* finished its round in May. When the chairman tried to arrange a new round many of the members were not interested, as a result the *iqub* dissolved. Although the *ita* money is very helpful to overcome financial problems, uncertainties about the ability to repay and the social pressure not to default payments can create a tremendous degree of anxiety for members, particularly for those who have no secured source of income. On this basis *iqubs* can be said to be a short term phenomenon. Yet, in other cases a new round of *ita* is arranged. For instance, Adamu and Tadesse's *iqubs* in Ottawa have already begun a new round.

Because rules and regulations are not made in due formal legal process and because *iqubs* cannot resolve disputes through court procedures, members always stress the importance of mutual trust and friendship. The centrality of trust in *iqubs* then gives rise to the need to screen out new members. New members are first introduced by an *iqub* member and their admission requires unanimous consent. The most important task is studying the background of a person such as sources of income and present and past social relations with others. Should members feel that the person is not trustworthy he/she will be told to take the *ita* only in the last round.

Yet, there is no evidence of defaulting or alone disappearing without repaying. In a situation where a person defaults due to circumstances beyond his or her control (layoffs, bankruptcy, for example), he/she will not be pressured to repay. For instance, one of the members in Adamu's *iqub* in Ottawa used to own a restaurant business. When he declared bankruptcy members were left with no choice but to understand his critical situation. They used *iqub*’s “reserve money” i.e., income derived from fines, etc., to pay for all his *ita* obligations.

Members of *iqubs* often attempt to save part of their wage earnings by becoming an *iqub* member. In particular, this is very important for those who run their own taxi business and who get paid cash for their services. Members like Ambachew have been able to buy a “license plate” and run their own taxi business. Ambachew himself used the *ita* cash money to buy a vehicle at an auction for almost fifty-percent less than the price from the car dealers. An *iqub* has also helped Tadesse to start a taxi and a restaurant business. Some members in his *iqub* had also been able to use the *ita* money for down payment of a mortgaged house. At the later stage these mortgage holder would use the *ita* money to renegotiate mortgage payments with banks by reducing the outstanding balance by a lump sum. For other members the *iqub* helped them to pay for car insurance, meet familial obligations—such as sending money home, buy furniture, prepare wedding, and travel.

Even though many perceive that *iqubs* are a short term phenomena, many more also attach a long term importance to the continuity of their functions. First, *iqub* provide individuals, particularly those who own a business and who are in debt (mortgaged house, for example), with a financial safety net. For example, if a taxi breaks down, the owner can always go to the *iqub* and request for the *ita* to help cover the cost of repair; it will cost him nothing except a $50 charge for the privilege of getting the money without waiting for his turn. Another example is wanting to fly to Ethiopia or somewhere else in emergency situations. If this happens the chairman of the *iqub* can phone people and raise at least half of the *ita* money within twenty-four hours. In Hassen Osman’s case, for example, *iqub* had finished its round in May and was then dissolved. But in October Hassen heard some bad news: one of his friends who lives in Washington had been admitted to hospital. He then immediately phoned his former *iqub* members and was able to raise $2,000; this incident reactivated the *iqub* and a new *ita* round then began. If a member does not have money at hand during such emergency situations he/she can always borrow from one of his or her fellow members.

Finally, *iqubs* play a crucial role in the social life of individual members. For instance, members highly value the sense of belonging to this form of social group and getting together each week or month to engage with friends. *Iqubs* also intervene to resolve family disputes and disputes among members.

**Mahabers (“Social Network”)**

*Mahabers* are religious associations devoted to honouring a Saint for whom the group is named. The two *mahabers* are hosted on the 29th of each month (21st in Julian or Ethiopian calendar) to honour *Kidist Mariam* (St. Mary). *Mahabers* are associations organized around people who live in the same area. Hence, a religious *mahaber* is devoted to honouring a saint. The former Marxist-Leninist military regime created the Gebere *mahabers* (Peasants Association) to help implement the land reform and to perform administrative and policing tasks in the area. There were also *meredaja mahabers* organized for the purpose of helping each other, or to raise funds and support development project in rural areas. For the purpose of this study, however, attention is only directed to religious *mahabers*.

Religious belief systems have an immense influence in Ethiopian society, particularly in the Northern region. Christianity became Ethiopian official religion in the 4th century. The Ethiopian Tewahedo Orthodox Church is one of the oldest religious institutions in the world. The tradition of *mahabers* is inherited from the Acts of Apostles.1 The twelve Apostles in Jerusalem gathered together to eat and drink in honour of saints. By doing so, the Apostles were also teaching religious ideas about the importance of

---

Refuge, Vol. 15, No. 3 (June 1996) 33
"togetherness" and mutual assistance in the organization of community life. Hence the name of a mahaber is normally inherited from the church in the vicinity. For example, if the name of the church in the vicinity is St. George the group will be named after it.

A mahaber often consists of twelve members and one Muse (Moses) who acts as chairman. As the name implies, the title of Muse is derived from the biblical story about Moses, who organized his people to lead them out of misery from Egypt to Israel. In the same manner, the Muse is expected to think, feel and act like Moses. The functions are limited to prayers, eating and drinking, expression of primordial sentiments, social and political discussion and resolving disputes among members. There are no written rules that govern a mahaber organization.

The event is hosted on a Saint's day, and there are about ten religious days in each month in Ethiopia. Each member hosts the mahaber at their homes on rotating basis. Members arrive in late afternoon. A priest opens the occasion with blessing; indeed, no ceremony takes place without his blessing. A loaf of bread is then cut and served, followed by food and drink. Members either depart late in the evening or stay overnight; it depends on how elaborate a meal the person can afford.

Mahaber members visit each other in times of birth, christening, death and sickness. In rural areas members work together on each other's farm fields on rotating basis. If a member falls sick during planting or harvesting season, they help to plough or harvest the fields. In the cities, mahaber members contribute money if a fellow-member experiences difficulties. The social bond is so strong that a member cannot associate with the opponent of another member. Members of the same mahaber are not supposed to marry a widow or a divorcee of a fellow member.

Case Studies: Wegayehu's mahaber was created two years ago and has twelve members, four men and eight women. They came from Addis Ababa, and among them are people who were administrative staff at Addis Ababa University, government officials, an ambassador and a retired Colonel in the Ethiopian army. The mahaber has a constitution that outlines the rules governing the conduct of members, the role and function of the organization. It gives the mahaber a life span of one year and as such is subject to revision each year. There is an elected chairman, a secretary, a treasurer, and a social committee devoted to preparing events for special occasions.

Desta's mahaber was established three years ago. It consists of six families and represents a typical traditional social setting. For instance, it does not have written rules whereby members only rely on such Ethiopian values and traditions as mutual trust, mutual aid, honesty and integrity. Members knew each other in Gondar, Ethiopia. Shared concerns about their children and their own social existence as a family unit constitute the most important aspects in their association. Members believe that the mahabers setting is an ideal social environment: it brings them together every month to exchange news and share ideas; children also go with their parents and "have fun." From the parents' point of view, the mahaber even represents a socializing agent for children about Ethiopian values and traditions.

Mahaber events are hosted on rotating basis among members but where to host it is left to the individual. For instance, on some occasions functions are held in restaurants. Members begin arriving in the afternoon. The ceremony in Admasu's mahaber opens with prayers; a loaf of bread is cut and served. Socializing, eating and drinking as well as the exchange of information and views follow.

Each member in both mahabers contributes $20 to a common fund each month, which is used to cover expenses in times of death or sickness of members, their families and close relatives. Members are also expected to contribute extra money for social functions in such times. Desta's mahaber rather holds an ita in conjunction with monthly gatherings on permanent basis. Decisions in relation to the ita or money aspect are totally controlled by men, while women control the organization of the mahaber's functions. In both mahabers' case, however, there are no rules or a wase (guarantor) requirement for a member who receives the ita money.

Newcomers to these mahabers are first introduced by a member. These

In sum, mahabers constitute not only the religious aspects of Ethiopian culture but they are also an alternative means to create a traditional safety net in Canadian society that substitutes for broken family ties.
less, after pressure by members he became willing to continue his membership. The mahaber had encountered similar difficulties before and almost dissolved following the absence of some members.

In sum, mahabers constitute not only the religious aspects of Ethiopian culture but they are also an alternative means to create a traditional safety net in Canadian society that substitutes for broken family ties. For instance, members visit each other in times of birth, christening, stress and sickness, including preparation of picnics and other special events. Getting together once a month and their common sentiments to share resources in times of “joy and sadness” gives social aspects of mahabers a legitimacy as equal as the aspect of religious devotion.

Idirs ‘Insurance’

Membership in idir involves making money contributions to a common fund. According to Levine (1965) idirs originated from the Guraghe society in the 1930s and soon gained widespread popularity: “They are organized on a territorial basis, in villages, towns, city quarters; on an ethnic basis and even on an institutional basis as among employees of some government ministries” (p. 277). Other scholars like, Hoben (1973) and Messing (1985), consider idir as an Amharic tradition that was later adopted by other ethnic groups.

Idir money is dispensed to members in times of sickness, and loss of property due to accidents (fire and theft, for example). However, the central purpose of idir is to cover funeral expenses since it is regarded by Ethiopians as more important than a wedding or other life experience. In urban Ethiopia, in particular, where only a few can afford to make prior arrangements for funeral expenses, and especially when there is no extended family, idir organizations provide an alternative support system.

At the time of a death of a member or his or her family or a relative all idir members are immediately informed. A cash payment is quickly made to the affected family, and members soon take command of the organization of functions (a member who fails to show up will be fined). A tent is erected and tables and chairs set at the home of the mourning member to receive those who come to pay their last respects. Food and drink is prepared. This function may last for few days.

Case Studies: This idir is organized around people who came from the Wello province for the purpose of helping each other through resource sharing and mutual emotional support. It consists of 20 members, with an almost equal number of men and women. Like iqubs and mahabers, the idir has a leadership composed of a chairman, secretary and a treasurer. It has also a guideline which outlines such rules and regulations as requiring members to attend all meetings, the amount of payments for the common fund and methods of payment, and ways of dispensing financial assistance to members in times of need. It prohibits members from bringing any agenda that relates to politics, religion and ethnicity (a member could have his or her own political leanings but cannot exercise it in the idir domain).

Members start gathering in the afternoon. Food and drink is served immediately. The rest of the time is devoted to social engagements. Near the end of the program formal discussions would resume, mainly devoted to presenting a financial report and making arrangements for the next meeting. There is a contribution of $20 to a common fund. The money will be dispensed to members in such times of financial need as wedding, sickness, or death of a member’s relative. There is also a subgroup within the idir that holds an ita every month. It amounts to $2000, with each of the ten members contributing $200. Low income and unemployed people are also encouraged to get involved. For example, four people can contribute $50 each to own the ita; hence, both the ita money and the debt will be divided among them. There are no rules nor a guarantor or a signature. Ita allocation is based on need rather than a lottery system.

Most of the members had left their country when young and share common difficult experiences of life here in Canada and in other asylum countries. For this reason, there is a strong emotional attachment towards each other. Older people in the idir provide a role model for young members. Those elders identify themselves socially and psychologically with others, and therefore, are highly respected by young people like Tekola. Tekola feels how comforting it is to ask advice and support from those members. He goes as far as to say that role models are needed in the community to help young people like him organize social life and develop a new identity.

Like iqubs and mahabers, a member first introduces the prospective member. The member promises to take responsibility should the would-be member fail to conform to the organization’s norms and values. The would-be member will be given the idir’s guideline. A committee composed of the chairman, secretary and treasurer, then screens the individual. If it is unable to reach a decision, the matter is referred to the general discussion. According to the chairman, this procedure is needed to screen out people who do not conform to the idir’s values and principles. No doubt these sentiments are developed in response to widely prevalent perception that the Ethiopian community in Toronto has been politicised along ethnic/political lines.

Implications for Adjustment

Idirs, mahabers and iqubs create a social world for Ethiopians, one that exhibits who they are and enable them to express themselves. Ethiopian shared values and traditions, as well as shared experiences, such as discrimination in the host society, generate sentiments and perspectives that serve to hold individual Ethiopians together, and as a framework for social re-organization. Leadership roles, decision-making structures, communication or interaction patterns, and social control systems are defined to be compatible with their expressive behaviour. An exam-
ple is the nature of idir, mahaber and iqub leadership, which is defined to play a social counselling and mediating role among its members and between a member and an outsider.

The idirs, mahabers and iqubs studied here have not been in existence for more than three years. Their members are drawn together more by friendship, shared experiences and concerns but less so by common origins of ethnicity; in fact, as far as I know none of the organizations is ethnically homogeneous. The Kidist Mariam mahaber consists of people with a middle class background. Idir and iqub members lived together as refugees in asylum countries. Desta’s mahaber consists of families with children. There is one mahaber that has seven young women members, two of whom are single. The Meskel Flower Cooperative Association was formed by the people who had lived in Greece as refugees.

Iqubs, mahabers and idirs by no means are to be viewed as sectarian organizations. The fact that their membership is composed of “like-minded” Ethiopians, and the fact that they are detached from the Ethiopian Association or other immigrant/refugee service agencies should not imply that they are a means to aggrandize self-serving purposes. Rather, such social organization formations would generate the dynamism that works towards creating an organic link between the individual Ethiopian and his or her Toronto community by encouraging the idea of solidarity and helping to develop a new vision of what life in Canada is and how it should be organized in the future.

The cultural linkage of iqubs, mahabers and idirs to those organizations that exist in Ethiopian societal environment is obvious, as evidenced by the similarity of how ceremonies proceed, the language of communication, mutual respect, recognition of elders, and the subordination of individual priorities to collective concerns in relation to organizational goals and objectives. It is also such cognitive orientation and common sentiments which constitute an important element of social solidarity and pave the way for the creation of those informal organizations.

Of importance is how iqubs, mahabers and idirs are suited to Ethiopian immigrants/refugees’ capacity to direct and manage problems which would surface their in domains. Face-to-face interaction enables them to make decisions in the event setting, whereby every member then attempts to influence outcomes. The elected leadership have more responsibility than members, not more power. The strong emphasis on conforming to group values enables members to respond to each individual’s behaviour. For example, a member who was involved in an altercation during an entertainment night might have to give an explanation about the incident and how he/she got implicated in it. While that person would likely be given the necessary support, but one cannot also rule out the chance of being subjected to a serious criticism about his or her behaviour.

Likewise, idirs, mahabers and iqubs’ to proactively intervene in family disputes. It is common for an idir or mahaber to summon the spouses to the gatherings, and attempt to reconcile them. First there is a disapproval of both parties for quarrelling—implying that both have indeed violated family values and traditions; and then analysing the cause of the problems in the wider context. More often than not, the root cause is directed to the external environment: the acts of other people, the wider community, the wider society, etc., which enables the spouses to free from feeling shame and apprehension. Moreover, in the course of that event both the husband and wife will become active participants, not passive listeners, unlike a social worker advising the client.

Iqubs provide a means to mobilize financial resources within the Ethiopian community and to overcome economic problems. The rotating scheme of receiving the ita money, coupled with the absence of interest payments and collateral requirements, ensures accessibility for an average person. The social pressure not to default on payments when itas are held imposes saving discipline. Idirs and mahabers, on the other hand, are welfare organizations, more geared to addressing social problems. They provide a means for Ethiopians to come together and create a mutual support system: resolving domestic disputes, providing role models, preparing functions for new arrivals (a family or relative of a member), giving moral and financial support for sick and distressed individuals, etc. “Let us stay together in times of joy and sadness” is a common sentiment among members. Had the social aspect not been significant, there would be no purpose for the existence of idirs and mahabers, considering that Ethiopian immigrants and refugees have been able to access government social safety nets such as welfare and unemployment insurance. However, there is a difference between idirs and mahabers, precisely because the later remains to identify itself with religion. Ethiopians regard participation in mahabers as a religious as well as a social obligation. Nevertheless, religious values serve as social fabric to promote unity among Ethiopians; particularly, at a time when the psychology of many people in Toronto community is tainted by the perception of enduring political and ethnic differences.

Idirs, mahabers and iqubs strengthen Ethiopians’ aspiration for self-sufficiency. Experience has taught Ethiopians that continued dependency on outside (government and nongovernmental) sources of assistance does not provide a secure command over the necessities of life in Canada. While many Ethiopians continue to depend on welfare and government housing programs, this dependency in turn brings about frustration and has a demoralizing impact. Thus, pulling social and economic resources together helps attain self-reliance. In this light, idirs, mahabers and iqubs facilitate the process of reconstructing broken relationships or creating new ones, whereby such relationships lead to arrangements that complement the efforts of one individual against another, in order to act together as a cohesive.
social unit. Finally, *idirs*, *mahabers* and *iqubs* share common characteristics such as:

- Members define what their needs are and self-finance their own activities;
- Values and norms encourage solidarity
- Competition or intrigue for power are absent.

Conclusion

As recent arrivals in Canada, Ethiopians encounter a host of social and economic problems. The formation of *iqubs*, *idirs* and *mahabers* in the Ethiopian community in Toronto and Ottawa, signifies a response to these harsh social and economic realities. These organizations help mobilize social and economic resources within the Ethiopian community to overcome difficulties associated with settlement. Ethiopians shared experience of, for example, displacement, helplessness, dependency, loss of dignity and emotional deprivation, all are threads that hold individual Ethiopians together and sustain those social organizations.

The continued existence of *iqubs*, *mahabers* and *idirs* depends not only on the potency of Ethiopian values and traditions, but also on their long-term viability to provide support for members to attain their economic and spiritual and psychological and cultural needs. Hence, *iqubs* are viewed by members as a temporary self-help organization, that could be no longer needed once a member overcomes his or her financial difficulties. However, there is a strong social significance attached to *mahabers* and *idirs*. As people who came to Canada in their youth grow older, the meaning of social life becomes of paramount importance. The social environment in *mahaber* and *idir* settings enables parents and children to gather once a month where household conflicts and frustrations are resolved through the mediation of the members. This becomes imperative, for Ethiopian culture does not encourage an open discussion of family disputes, nor do Ethiopians rely on professional counsellors. In one Ethiopian community workshop a woman denounced social workers for pushing spouses into adversarial positions and encourage separations, instead of reconciliation. More importantly, members visit each other in times of birth, christening, sickness and the death of a family of a member and this creates almost an extended family environment.

Finally, through engagement in a social setting Ethiopians construct a meaning out of their past and present experiences and develop a new vision of life in the host society. This is viewed as a positive trend for the Ethiopian community. Two interdependent and interrelated factors shape the relationship between individuals and their community: a community environment should help individuals fulfill their social and economic needs, spiritual/psychological satisfaction, and cultural entertainment; and secondly, there must be, among other things, respect for social opinions and compliance with commonly accepted standards.

Moreover, attitudes and patterns of interaction should be appropriate for social and economic exchange in a wider society (Thomas and Znaniecki 1958). It is at this point that one comes to appreciate the informal organizations in the Ethiopian community for their role as catalysts to re-organize the dispersed Ethiopian population, and to create the social and economic resources necessary for the formation of an “Ethiopian” community in the Canadian multicultural environment. In light of immigrant and refugee adjustment as a process of change and continuity in individual values and behaviour, the degree to which *idirs*, *mahabers* and *iqubs* are innovative and adaptive to Canadian socioeconomic and cultural environment will determine their long term viability as alternative support systems. A conventional view might attach a stigma to informal organizations as “backward” and view them as passive. Dynamic organizations, by contrast, have the capacity to continuously grow. Growth in turn leads to expansion—enlargement of the sphere of the organization, and necessitates a systematic management.

Before assessing whether *mahabers*, *idirs* and *iqubs* are dynamic, let us first understand why change in the organization is needed. At one point individuals’ normal routine of behaviour and relationships could be affected by economic and social changes. For example, a new routine of work could affect the frequency of contact among individuals. The new arrangement, therefore, might force members of an organization to move away from direct participation and hand over task functions to elected individuals. For informal social organizations with a culture of non-hierarchical structure, “formalizing” the group occurs through the codification of rules and regulations to outline decision procedure and the terms and conditions for members to abide by such decisions.

In conclusion, informal social interaction and resource exchanges provide immigrants and refugees with an important support mechanism in their adjustment process. Adjustment is viewed as an incremental process of “getting used to living in Canadian society,” which requires not only the skills and knowledge necessary to participate in Canadian economy, but also the existence of social organizations that provide a medium of cultural and spiritual expression.

Notes

1. Personal communication with Liqaa Kahan Mesale Engda, Ethiopian Tewehado Orthodox Church in Toronto.
2. Meskel literally means the foundation of the Holy Cross, one of the many religious holidays in Ethiopia. It is celebrated on the 24th of September each year.

Refuge Rights
Report on a Comparative Survey
by James C. Hathaway and John A. Dent

Toronto: York Lanes Press, 1995, pp. 82. $11.95 • ISBN 1-55014-266-6

Are visa controls intended to keep refugees from reaching an asylum country legal? Can asylum-seekers legitimately contest conditions of detention? At what point do refugees have the right to work, or to claim social assistance?

These are among the many issues addressed by Refugee Rights: Report on a Comparative Survey, a groundbreaking analysis of the human rights of refugees around the world. Working in collaboration with thirty renowned legal experts from Europe, Africa, Asia, Oceania, North America, and Latin America, Professor James Hathaway, Osgoode Hall Law School, York University, and John Dent, Refugee Law Unit, Centre for Refugee Studies, York University, analyze the international legal instruments that set the human rights of refugees. By grounding their analysis in real-life challenges facing refugees today, Hathaway and Dent have produced a book as valuable to activists as to scholars.

Refugee Rights will provoke debate on the adequacy of the international refugee rights regime. It is essential reading for everyone concerned to counter threats to the human dignity of refugees.

</table>

Claims Referred are adjusted to take into account claims transferred out;

Decisions Pending include all claim heard to completion since January 1, 1989 for which no decision had been rendered by the end of the reporting period (cumulative sum total); Decided means that a decision has been made on the claim.

Total Claims Pending include all claim referred to the CRDD, that have not yet been finalized as of the end of the reporting period.

*Computed from Immigration and Refugee Board Statistical Summary, April 1996. ASA*
CALL FOR PAPERS

REFUGEE CHILDREN

The Centre for Refugee Studies will soon publish a special issue of Refuge on ‘Refugee Children.’ The issue will address topics such as:

- The children in refugee camps
- The effects of political persecution and forced migration on refugee children
- Different approaches in the treatment of refugee children and their families
- Refugee children in the school system
- Exemplary local programs for refugee children and families
- Effect of Canadian regionalism on refugee resettlement

Papers are now being invited on these issues and other related areas for consideration. Please send your contribution asap.

Articles may not exceed 16 pages (double-spaced) or about 4000 words. Short papers of about 900 words are also welcome. Word processed submissions may be sent in disc or by e-mail.

For further details, please contact:
